BENGUET STATE UNIVERSITY

SPMS Institutional Workflow — Spoken Presentation Script

CSC SPMS 4-Stage Architecture • 4–5 Minute Pacing • Capstone Defense Edition

1. THE GOLDEN RULE OF CASCADING (~45 SEC) — INTRODUCTION

[SLIDE: SPMS Institutional Architecture & Golden Rule]

"Good day, members of the panel. Today I will demonstrate the Strategic Performance Management System of Benguet State University.

Traditional performance evaluation often suffers because individual accomplishments are disconnected from institutional goals. SPMS-BSU solves this through one fundamental rule:

'Institutional targets flow downward; individual accountability rolls upward.'

In our system, Supervisors—from the University President, to the VPAA, Deans, and Department Chairs—have the authority to cascade targets down to their subordinates. Conversely, Faculty and Staff form the terminal operational tier. Because they do not supervise subordinate personnel, they cannot cascade further. Their role is strictly to formulate individual commitments, execute, and submit evidence."

2. STEP-BY-STEP ACADEMIC CHAIN (~2.5 MIN) — CORE WORKFLOW

[SLIDE: Step 1 — Admin Cycle Hub & Setup]

"Step 1: The University Admin initializes an institutional cycle in the Cycle Hub—for instance, July to December 2026. The Admin sets the deadline windows for Target Setting and Evaluation. Upon release, the cycle opens in active Target Setting status, and base folders are provisioned for the Executive Tier."

[SLIDE: Step 2 — VPAA & OPCR Target Cascading]

"Step 2: The Vice President for Academic Affairs (OVPAA) opens her OPCR—the Office Performance Commitment and Review. Dr. Santos formulates university-level academic goals: curriculum enhancements, board exam passing targets, and research quotas. Once the President approves her OPCR, she clicks 'Cascade to Staff'. The system automatically spawns division folders for all College Deans with the VPAA's approved targets pre-loaded."

[SLIDE: Step 3 — College Dean & DPCR Alignment]

"Step 3: Dean Mercado of the College of Information Sciences opens his College DPCR. He doesn't start from scratch; he sees the VPAA's approved commitments with a clear attribution badge: 'Cascaded from: VP Ana Santos'. Dean Mercado formulates college-specific commitments that support those goals, gets VPAA approval, and clicks 'Cascade to Department Chairs'."

[SLIDE: Step 4 — Department Chair & Program Deliverables]

"Step 4: Chairperson Diaz of the BSIT Department receives the College DPCR and establishes academic deliverables: faculty teaching loads, syllabus delivery, and capstone mentorship. Once Dean Mercado approves the department DPCR, Chair Diaz clicks 'Cascade to Faculty', generating IPCR folders for all department educators."

[SLIDE: Step 5 — Faculty IPCR & Terminal Ratee Boundary]

"Step 5: Professor Tanaka opens his individual IPCR. All approved department commitments and rubric definitions are already pre-populated. He enters his specific workload commitments: teaching 18 units, advising 5 capstone groups, and maintaining high student ratings.

Crucially, at this level, the Cascade button is completely disabled. As an individual ratee, Professor Tanaka cannot cascade to anyone else. Additionally, if an upstream supervisor hasn't cascaded yet, the dashboard clearly marks unstarted faculty as 'Pending Cascade' so administrators immediately spot management bottlenecks rather than blaming employees."

3. MID-YEAR MONITORING & YEAR-END EVALUATION (~1.5 MIN) MONITORING & RATINGS

[SLIDE: Monitoring Phase & Means of Verification (MOVs)]

"Throughout the semester, the system enters Performance Monitoring. Rather than scrambling for paperwork at year-end, faculty progressively attach Means of Verification (MOVs)—such as approved syllabi, grade sheets, and published papers—directly to specific target rows. Supervisors provide real-time coaching logs in the digital comments panel."

[SLIDE: Accomplishment Reporting, Evaluation & PMT Calibration]

"When the evaluation window arrives, faculty submit actual accomplishments. Department Chairs grade each output using the CSC-prescribed Quality, Efficiency, and Timeliness (Q, E, T) matrix. All numerical averages and weighted scores are computed automatically server-side, eliminating math errors.

Finally, the Technical Working Group (TWG) audits the evidence, and the Performance Management Team (PMT) calibrates scores university-wide to eliminate grading disparities between colleges before the President approves the final honor roll and archives the cycle."

4. QUICK DEFENSE CHEAT-SHEET (PANEL Q&A) PANEL Q&A

Q: What stops faculty from modifying cascaded targets?

A: Cascaded descriptions and rubric criteria are read-only for ratees. Faculty can only edit their commitment quantities and actual accomplishments.

Q: What if an employee reports to two supervisors?

A: SPMS-BSU supports multi-supervisor routing. Targets inherited from different supervisors appear with separate attribution badges and independent evaluator sign-offs.

Q: Why does the dashboard say "Pending Cascade" instead of "Draft"?

A: If a Dean hasn't cascaded to chairs, faculty folders don't exist yet. Labeling them "Pending Cascade" holds supervisors accountable for cascading delays instead of penalizing employees.

Q: How is mathematical integrity protected?

A: Quality, Efficiency, and Timeliness scores and weighted averages are calculated server-side in PHP. Ratees and evaluators cannot alter rubric formulas or final scores.
